MAHBUBUR RAHMAN

Professional Profile

Result-driven and highly analytical technology professional with a robust technical foundation in Python scripting, advanced relational database management (MySQL), and systems architecture. Proven expertise in designing optimized database schemas, writing complex SQL queries, and troubleshooting server-side infrastructure on macOS environments. Passionate about architecting scalable data pipelines (ETL) and implementing stringent cybersecurity frameworks. Adept at bridging the gap between data engineering and secure system infrastructure to drive operational efficiency and data integrity.

Core Competencies

- **Data Engineering:** Database Schema Design, Data Modeling, Relational Databases (RDBMS), Query Optimization, Data Integrity & Constraints.
- **Cybersecurity & Systems:** Network Security Fundamentals, Ethical Hacking Methodologies, Secure Coding Practices, Linux/Unix Administration.
- **Programming & Scripting:** Python (Advanced Scripting & Automation), C (Foundational Systems Programming).
- **Tools & Platforms:** MySQL Workbench, Git/GitHub, macOS Environment, Terminal/Command Line Utilities.

Technical Projects

Relational Database Architecture & Management (MySQL)

- **Objective:** Conceptualized and deployed a comprehensive relational database system via MySQL Workbench to streamline institutional data tracking.
- **Impact & Execution:** Designed optimal entity-relationship (ER) diagrams, enforced data normalization rules, and authored complex queries for high-performance data retrieval.
- **Problem-Solving:** Successfully diagnosed and resolved critical database connectivity and server configuration bottlenecks, ensuring 100% environment uptime.

Custom Automation & Logic Scripting (Python)

- **Objective:** Built a suite of automation scripts to optimize data manipulation workflows and routine system processes.
- **Impact & Execution:** Utilized Python's core libraries to handle structured data sets, reducing manual data processing time through efficient algorithmic logic.

Professional Experience

Associate Technical Developer (Independent / Freelance)

January 2026 – Present

- Architect and maintain localized MySQL database environments, focusing on schema performance tuning and secure data storage.
- Conduct self-led penetration testing simulations and vulnerability assessments within controlled environments to master ethical hacking frameworks.
- Automate routine desktop and server operations on macOS platforms utilizing Python scripting, enhancing workflow productivity.

Education

[Your Degree Name, e.g., Bachelor of Science in Computer Science]

[islamic University Bangladesh], [DHAKA] \ Expected Graduation: [running]

[Your Higher Secondary Education / College]

[NOTRE DAME COLLEGE MYMENSHING, [MYMENSHING \ Timeline: [2021 -2023]

Advanced Certifications & Continuous Development

- **Data Engineering Professional Track:** In-depth study of ETL processes, Data Warehousing, and Big Data lifecycle management.
- **Information Security & Ethical Hacking:** Active learning in network protocols, system vulnerabilities, and defensive security countermeasures.

Languages

- **English:** Professional Working Proficiency
- **Bengali:** Native / Bilingual Proficiency
- **Hindi :**for professional work
